

# GKB Dragframe

Have you just worked your natural grass or hybrid sports field? Do you want to level the dress soil or sand quickly and easily, making irregularities a thing of the past? Then the GKB Dragframe is the perfect machine for you. With the Dragframe you can dot the i's and bring your field in top condition. The Dragframe has been developed according to the GKB principle that it is as strong as we would like it to be. The fact that we at GKB are also contractors proves that these are not empty words. This makes the Dragframe the perfect machine for leveling your sports field!

The Dragframe consists of the middle deck to which the 2 side decks are attached with hinges. As a result, these side decks are foldable and you can easily drive from field to field with a transport width of 1.40 m. The Dragframe is optionally available with hydraulically folding side decks. This makes it even easier for you to do your job!

The wokkels of the Dragframe do not turn in the same direction. They alternately turn left or right. This has been done deliberately, and ensures a smoother processing. With a working width of 4 metres, the Dragframe ensures that you have leveled your field in just a few passes. The Dragframe is therefore a machine that should not be missing on your sports field!
